

Science Homework 10th October 2025

Over the next week, observe how sunlight changes around your home (or outside). Record what you notice about:

- Where sunlight shines the most during the day
- Which places get warm or stay cool
- How light helps you see inside your home or outside

Imagine your home is a castle! Write or draw about how these changes in sunlight might affect the people living there. For example, how would sunlight help them stay warm, find their way, or feel comfortable?

Prompt ideas for your diary:

- What time of day does sunlight shine in your bedroom or living room?
- Are there places in your home or garden that stay dark or cool?
- How might the people in a castle use sunlight to their advantage?
